

General Storage Guidance Notes

Rubber Products (EPDM & Silicone)

As a general rule, Rubber is a very robust material. That said, we offer the information below only as a general guide during medium to long term storage.

- Store in a cool dry environment
- Temperatures ideally lower than 120°F (49°C)
- Store away from direct sunlight

Our finished Rubber parts that are stored in our warehouse are given a 2-year shelf life after production. They will then be re-inspected and re-certified every year after.

Temperatures above 120°F (49°C) will accelerate the exudation of the part.

Under normal conditions, and not exposed to direct light, the part can last up to 5-10 years in a controlled environment.
